Displacement	liters in ³ 37,7 2,300	liters in ³ 37,7 2,300
Max. Torque	@1300 rpm	
	N•m lb ft 4 095 3,020	N•m lb ft 4 630 3,415
Torque Rise	30.5%	30%
Starting	Electric	Electric

TRANSMISSION

Allison DP-8963, Planetary type, full automatic shift. Integral torque converter TC860 with automatic lock-up to lock-up shifting in all ranges. Remote mounted, 6 forward speeds, 1 reverse. Allison Commercial Transmission Electronic Control provides park brake interlock and hoist interlock as well as built in diagnostics.

Maximum Speeds @ Governed Engine Speed with standard 27.00R49 tires

Range	Gear Ratio	Standard		Optional	
		3.73 Differential		3.15 Differential	
		km/h	mph	km/h	mph
1	4.24	9,3	5.8	11,9	7.4
2	2.32	17,0	10.6	21,7	13.5
3	1.69	23,4	14.5	29,8	18.5
4	1.31	30,2	18.8	38,4	23.9
5	1.00	39,5	24.6	50,3	31.3
6	0.73	54,8	34.0	69,7	43.3
R	5.75	7,0	4.3	8,9	5.5

DRIVE AXLE

Full floating axle shafts, double reduction provided by Euclid Model 2653 differential and single reduction planetary with balanced life gears in each wheel. Cyclo-paloid style hard cut ring and pinion sets with new, higher capacity planetary and differential bearings are provided to handle the increased payload. "A" parallel link mounting with "A"-frame top member which reduces "roll-steer" effect.

Ratios	Standard	Optional
Differential	3.73:1	3.15:1
Planetary	6.63:1	6.63:1
Total Reduction	24.73:1	20.88:1
Maximum Speeds		
with 27.00R49(**)E2/E3 Tires	km/h 54,8	km/h 69,7
	mph 34.0	mph 43.3

TIRES

Standard - Front and Rear	Rim Width
27.00R49(**)E2/E3	mm in 495 19.5

Optional
Optional tire types, treads and ply ratings available.

ELECTRICAL SYSTEM

Twenty-four volt lighting and accessories system. 100 amp alternator with integral transistorized voltage regulator. Four 900 amp, cold-cranking, 12-volt, maintenance-free, heavy-duty batteries connected in series/parallel.

LOAD CAPACITY

	m ³	yd ³
Struck (SAE)	35,7	46.7
Heap 3:1	47,0	61.5
Heap 2:1 (SAE)	52,7	69.0

	Tonne	Ton
*Payload depending on optional equipment	90,7	100

Note: Based on material density, Euclid will size an optional larger or smaller body to assure rated payload. Consult Euclid Market Support.

WEIGHTS

	kg	lb
Chassis & Hoists	51 942	114,513
Body	12 468	27,487
Net Machine Weight	64 410	142,000

Maximum Payload	90 718	200,000
Maximum GMW with Std. Tires [24.00R49(**)E2/E3]		
Including Options, 50% Fuel, Operator & Payload Not to Exceed	155 129	342,000

*Major Options

Approximate change in Net Machine Weight:

Light Duty Body Liners - 400 BHN Steel	3 858	8,506
Heavy Duty Body Liners - 400 BHN Steel	5 901	13,010
Set of 6 [27.00R49(**) E4] Tires	1 562	3,444

Weight Distribution	Front	Rear
Empty	49%	51%
Loaded	33%	67%

STEERING SYSTEM

Closed-center full time hydrostatic power steering system using two double-acting cylinders, piston type pump and brake/steering system reservoir. Accumulator provides supplementary steering in accordance with SAE J1511, ISO 5010.

Steering Angle			38°	
Turning Diameter (SAE)	m	ft in	22,65	74'4"
Steering Pump Output (@ 2100 rpm)	l/m	gpm	91	24
System Operating Pressure	kPa	psi	18 962	2,750

HYDRAULIC SYSTEM

Two (2) Euclid two-stage cylinders, double-acting in second stage, internal dampened (extend and retract) inverted and outboard-mounted. Separate Hoist/Brake Cooling reservoir and independent tandem gear pump. Electronically operated control valve mounted on horseshollar.

Body Raise Time (Loaded)	s		12	
Body Float Down Time	s		14	
Brake Cooling Pump Output (@ 2100 rpm)	l/m	gpm	459	121.3
Hoist Pump Output (@ 2100 rpm)	l/m	gpm	449	118.4
System Relief Pressure	kPa	psi	20 684	3,000

BRAKE SYSTEM

Brake systems meet or surpass SAE J1473 and ISO 3450, Alberta, British Columbia.

Service

All-hydraulic actuated front disc brakes with two calipers per front disc. Calipers are internally ported, each containing three pairs of opposing pistons. Rear brakes are oil-cooled wet discs.

Front Axle - Dry Disc

Disc Diameter Each (2 discs/axle)	cm	in	101.6	40
Brake Surface Area Per Axle	cm ²	in²	14 194	2,200
Lining Area Per Axle	cm ²	in²	4 129	640
Brake Pressure (Max.)	kPa	psi	13 790	2,000

Rear Axle - Oil-Cooled Wet Discs

Brake Swept Area Per Axle	cm ²	in²	79 282	12,288
Brake Pressure (Max.)	kPa	psi	10 515	1,525

Secondary

Two independent circuits within the service brake system provide back-up stopping capability. System is manually or automatically applied to stop machine within prescribed braking distance.

Parking

Drum, two shoe internal expanding type mounted behind transmission. Automatically applied if hydraulic pressure is lost. Manually controlled from shift console.

Size	mm	in	438 x 102	17 1/4 x 4
Lining Area	cm ²	in²	1 226	190

Retarder

Foot-operated valve controls all-hydraulic actuation of oil-cooled wet disc brakes on rear axle. System provides constant speed control on downhill hauls.

Capacity (Continuous)	kW	bhp	969	1,300
Capacity (Intermittent)	kW	bhp	1805	2,420

The Euclid R90 is equipped with an all-hydraulic actuated braking system providing precise braking control and quick system response. The brake control valve is actuated directly at the brake pedal. The controller has a unique variable front to rear brake proportioning that maximizes the stopping performance under slippery road conditions without having to deactivate front brakes.

WET DISC BRAKE

The Euclid wet disc brake is engineered for long service life even in the most extreme environments. The wet disc brakes are located on the rear axle and provide service braking, secondary braking and retarding. The brakes are of a multi-plate design and continuously oil-cooled. The sealed design protects against environmental contamination for prolonged service life. The wet disc brake is designed with automatic retraction and self-adjusting features to prevent drag and compensate for wear. Separate pedals activate the service braking and retarding functions.

COMMAND CAB III

Command Cab III integral ROPS (Rollover Protection Structure) is standard in accordance with SAE J1040 (1994) and ISO 3471. Dimensions comply with SAE J154 (1992) and ISO 3411. Double wall construction of 11 gauge inner and outer steel panels, lends itself to a more structurally sound cab. Foam rubber lining material along with foam rubber-backed carpeting and multiple layered floor mat act to absorb sound and control interior temperature. A properly maintained cab from Euclid, with doors and windows closed per work cycle procedures in SAE J1166 (1990), provides an operator sound exposure L_{eq} (Equivalent Sound Level) of 81.0db(a). A three-point rubber iso-mount arrangement to the deck surface minimizes vibration to the operator compartment. Electrical quick disconnect for ease of serviceability.

Excellent Serviceability. A removable front closure allows easy access to service brake valves and retarder valve. The upper dash utilizes four (4) removable panels that house gauges and customer options, each individually accessible. A removable closure located behind the seat provides easy access to the shifting control, CONTRONIC, and all electrical junction points.

Comfort and Ease of Operation. A wrap-around style dashboard positions controls within easy reach and visual contact. A full complement of easy-to-read gauges, CONTRONIC II monitoring and warning system with Liquid Crystal Display (LCD), a spacious environment, six-way adjustable mechanical seat, tilt/telescopic steering wheel, filtered ventilation, door locks, and a padded trainer seat, all contribute to operator convenience and comfort.

STANDARD EQUIPMENT

General

Air to oil transmission cooler	Halogen headlights
All hydraulic braking	Hoist interlock
Automatic transmission shifting	Hoist tank sight gauges
Body down indicator, mechanical	ISO decals
Body prop cable	LED taillights
Body up and down cushioning	Load/dump brake
Body up speed restriction w/light	Mirrors (front)
Canopy spill guard	Mirrors right and left, hand adjustable
Continuous heated body	Mud flaps
Cooling system sight gauge	NEOCON suspension struts
Cooling system surge tank	Operator arm guard
Dagger clamps (rear wheels)	Park brake interlock
Electric horns	Radiator grill guard
Electric start	Reverse alarm
Electronic hoist	Rock ejector bars
Engine belt protection	Steering accumulator
Fan guard	Steering tank sight gauge
Fixed steering stops	Swing-out grille
Fuel tank sight gauge	Tow points, front
Guard rails	Transmission sight gauge
	Wet disc brake wear indicators

Cab

Acoustical lining	Load counter
Air filtration/replaceable element	Service intervals, job site adjustable
Ash tray	Throttle position
Cab interior light	Total engine hours
Cigar lighter, 12 volt	Total idle hours
Door locks	Voltmeter
Foot rest (left and right)	Mechanical, 6 position seat
Full trainer seat	Modular instrumentation
Heater and defroster 7.6 kW 26,000 btu	Quick connect test ports
Integral ROPS/FOPS cab	Roll down windows
Liquid Crystal Display* (CONTRONIC II)	Rubber floor mat
Clutch pressure	Safety glass
Distance traveled	Seat belts, retractable (operator/trainer)
Engine oil pressure	Sun visor
Fuel gauge	Tilt/telescopic steering wheel
Gear selection	Tinted glass all windows
Integrated transmission diagnostics	Windshield washer
	Windshield wiper, intermittent

Gauges and Indicators

CONTRONIC II monitoring and alarm system, multi-function indicator lights:

- Air filter restriction
- Alternator
- Body up
- Brake pressure
- Central warning
- Converter temperature
- Cooling temperature
- Engine oil pressure
- High beam indicator
- Hydraulic filter
- Parking brake applied
- Retard oil temperature
- Steering filter
- Steering pressure
- Steering temperature
- Transmission oil pressure
- Transmission filter
- Turn signals/hazard

Do not shift light
Transmission malfunction light

Gauges:

- Brake temperature
- Converter temperature
- Coolant temperature
- Hour meter
- Speedometer
- Steering/brake pressure
- Tachometer

OPTIONAL EQUIPMENT

ACTIVE TRACTION CONTROL (ATC) w/ELECTRONIC DOWNHILL SPEED CONTROL (EDSC)
Additional halogen headlights
Air conditioning
Air suspension seat
Body liners (400 BHN) plates, STD and HD
Body sideboard extensions
Canopy spill guard extension
Cold starting aid
Differential, 3.15:1 ratio
Driveline guard-front
Engine compartment lights
Engine heater (oil & coolant)
Extra reverse alarm
Fast fueling

Fast coupling service center
Front brake cut-off
Field replaceable tube radiator
HAULTRONIC II LOAD MONITORING SYSTEM
Heavy-duty retarder cooling
High intensity headlights
Hoodsides (rubber)
Lube system, automatic
Lube system, centralized
Muffler, deck mounted
Radio & tapeplayer
Sound suppression package
Starter lockout switch
Tires (size, type & rating)
Transmission guard

Standard and optional equipment may vary from country to country. Special options provided on request. Consult Euclid Market Support.

*English, French, German, Spanish and Swedish language selectable.

Note: Dimensions shown are for empty machine with 27.00R49(**)E2/E3 tires.

SUSPENSION

Front and Rear Suspension

Independent trailing arm for each front wheel. NEOCON struts containing energy-absorbing gas and environmentally friendly compressible NEOCON-E™ fluid mounted between trailing arm and frame. The cast rear axle housing has a parallel link mounting with an A-Frame top member. Provides a reduced "roll-steer" effect which results in a more stabilized ride and contributes to lower overall frame stress levels. Rear mounted NEOCON struts suspend drive axle from frame. NEOCON struts provide variable damping and rebound feature.

The Euclid frame and suspension are designed to work in unison to provide maximum structural integrity and operator comfort. The formed rectangular frame rail construction provides superior resistance to bending and torsional loads while eliminating unnecessary weight. Euclid achieves long frame fatigue life through proven design and manufacturing practices. Smooth frame transitions minimize stress concentrations and steel castings effectively distribute input loads. Frame life is further enhanced by utilizing fatigue resistant weld joints and locating welds in low stress areas.

The unique trailing arm front suspension absorbs haul road input, minimizing suspension-induced frame twisting while providing independent tire action. Ride struts are mounted with spherical bushings, eliminating extreme sidewall forces by ensuring a purely axial input to the ride strut. The wide track stance of the trailing arm design and long wheel base assure a more stable, comfortable ride. The suspension struts employ gas and NEOCON-E™ fluid as the energy-absorbing media. This suspension continues to absorb energy when extreme dynamic loads are generated which significantly contributes to improved isolation of the operator and machine components.

BODY

Flat chute type, sloped floor, continuously exhaust heated. High tensile strength 400 BHN abrasion resistant alloy steel is used in thickness of:

	mm	in
Floor	17	11/16"
Front	8	5/16"
Sides	8	5/16"
Canopy	5	3/16"
Corner	11	7/16"

Optional Body Liners (Light Duty)

Floor, Corners & Top Rails	10	3/8"
Sides, Front, End Protection	6	1/4"

Optional Body Liners (Heavy Duty)

Floor & Corners	16	5/8"
Top Rails	10	3/8"
Sides, Front & End Protection	8	5/16"

The horizontal stiffener design of the Euclid body minimizes stress concentrations in any one area. Load shocks are dissipated over the entire body length. The closely-spaced floor stiffeners provide additional protection by minimizing distances between unsupported areas.

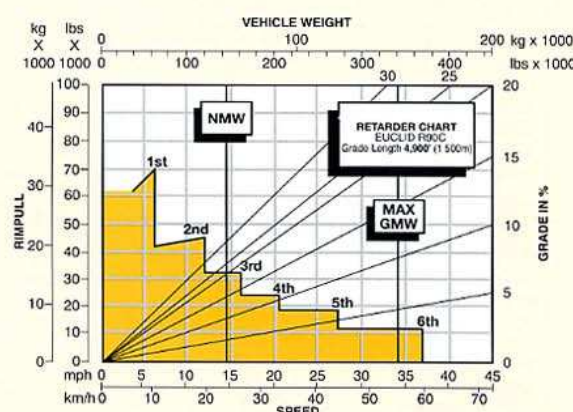

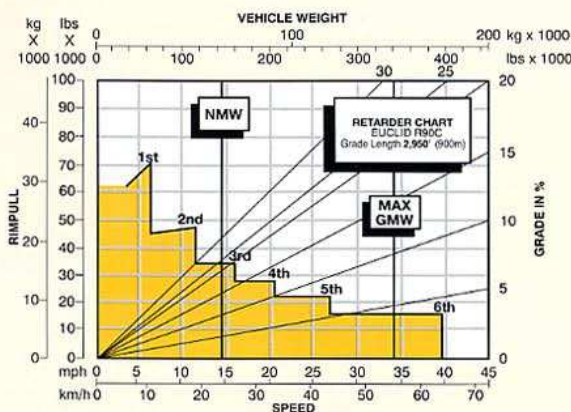

SERVICE CAPACITIES

	liters	gallons
Accumulator	37.9	10.0
Crankcase (incl. filters)	140,0	37.0
Transmission (incl. filters)	98,4	26.0
Cooling System	268,7	71.0
Fuel Tank	1003,0	265.0
Hydraulic		
Hoist Tank	318,0	84.0
Steering Tank	117,0	31.0
Differential	147,6	39.0
Planetaries	136,3	36.0
Windshield washer	3,8	1.0

FRAME

Formed rectangular rails with section height tapered from rear to front, bridged by five cross members, front bumper and front suspension tube. Cross member to frame junctions use large radii to minimize stress. Frame utilizes 345 MPa 50,000 psi yield strength steel.

INSTRUCTIONS:

Diagonal lines represent total resistance (Grade % plus rolling resistance %). Charts based on 0% rolling resistance, standard tires and gearing unless otherwise stated.

1. Find the total resistance on diagonal lines on right-hand border of performance or retarder chart.
2. Follow the diagonal line downward and intersect the NMW or GMW weight line.
3. From intersection, read horizontally right or left to intersect the performance or retarder curve.
4. Read down for machine speed.

NOTE: Photos and illustrations throughout may show optional equipment.

Under our policy of continuous product improvement, we reserve the right to change specifications and design without prior notice. The illustrations do not necessarily show the standard version of the machine.
