### Engine

A newly developed ISUZU engine the 6WG1X complies with Emission Regulations U.S. EPA Tier III and EU Stage IIIA. This produces higher output and torque, and far better fuel consumption than the previous model. 2% reduction in fuel consumption using the new engine system "SPACE5"(As compared with existing models)

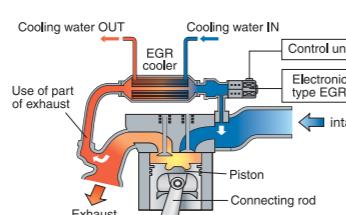

#### Common Rail Type High-Pressure Fuel Injection System

The system is equipped with a common rail type high-compression fuel injection system, which permits high-precision injection from multiple injectors under ultra high-pressure of more than 1600 atm. Precise control of injection time and injection quality at the rate of 1/1000 second optimizes combustion, improves combustion efficiency, and reduces PM (particulate matter) substantially.

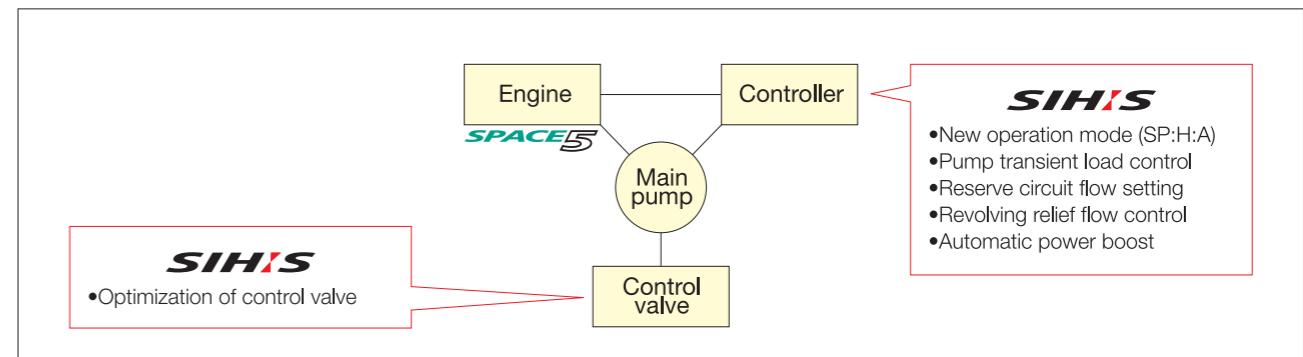

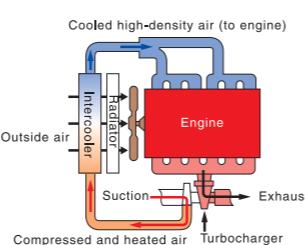

#### Cooled EGR System

The EGR (Exhaust Gas Recirculation) mixes exhaust gas, which is once exhausted, with the air intake that is taken in so as to lower the combustion temperature, thereby reducing NOx (nitrogen oxide). Adoption of the cooled EGR system, in which a water cooler is installed in the middle of the re-circulation pipe, permitting further decrease in the intake temperature, ensuring a better NOx reduction effect than the ordinary EGR.

#### 24 valve OHC Turbo Engine with Inter-Cooler

When the inter-cooler cools the intake air, which is compressed by a turbocharger and has reached a high temperature, the density of the air increases and the suction efficiency increases. Therefore, NOx and PM can be reduced substantially, permitting high output and improvement of fuel efficiency simultaneously.

#### SP (Speed Priority mode) SUMITOMO unique design

SP "Speed Priority" mode has been developed, which is not available in competitors models nor in our previous model. This will create biggest productivity in its class with more economical fuel efficiency even in comparison with the Heavy mode of our previous model. In addition, the throttle control is simple to use.

#### Automatic Power Boost SUMITOMO unique design

The digging power increases automatically in quick response to the working conditions without switching operations during heavy-duty digging work. It is SUMITOMO'S original design and continues for 8 seconds.

#### Quick and Smooth Control Response

A total review of the hydraulic circuit and miscellaneous hydraulic settings guarantee speedy and precise operation through a smooth control lever.

The integration of the new engine system "SPACE 5" and new hydraulic system "SIH:S" has created 2% fuel efficiency improvement in comparison with our conventional model.

#### Hydraulic Oil Flow Control SUMITOMO unique design

In the case of sudden lever movement and high load activation, the newly developed hydraulic control system reduces the main pump oil flow intentionally and keeps the engine speed at a constant level. This enables a reduction in fuel consumption. In addition, this also reduces the level of exhaust smoke due to excessive fuel injection.

#### Reduction of Hydraulic Oil Flow at Swing SUMITOMO unique design

The hydraulic oil quantity required at the time of sudden swing motion is limited. The new hydraulic system can start the oil flow volume at the minimum level and then allow it to increase on demand. This optimum oil flow control significantly improves the fuel efficiency.

#### Increased Pump Efficiency

The new modified hydraulic pump structure lowers the oil leak volume in the pump which means improved pump efficiency and improved engine fuel efficiency.

## Mode Selection by Throttle

Mode selection by pressing the button in our previous model sometimes cause inconveniences for the operator. The throttle control system has been upgraded and the new system "A" mode which stands for "Adjustment Mode" now covers the 3 previous modes of "Auto, Standard and Light". In addition there is "H" (Heavy) mode and "SP" (Speed Priority) mode, and the hydrostatic pump oil flow will be regulated automatically in each of the 3 modes respectively.

The SP mode is added to the operation mode. Furthermore, the A (Adjustment) mode is added to the SP and H modes, respectively. In comparison with the H mode of Dash 3B, the H mode of Dash 5 has reduced the fuel consumption by 2% as compared with Dash 3B.

Throttle knob position	1	2	3	4~15
Engine speed SH700	1,870	1,800	1,750	1,749~900
Engine speed SH800	1,800	1,750	1,700	1,699~900

Notes: FOPS level 2 cab guard is optional equipment.

# Durability

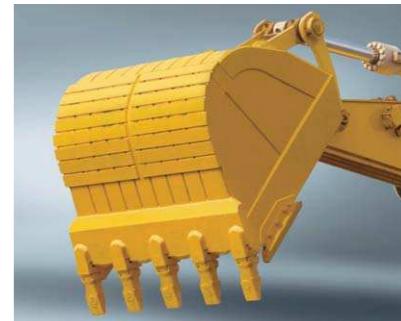

## Stronger boom and arm

The strength of all joints has been increased to ensure durability, permitting operation at any site with severe working conditions and a large workload.

## High-durability bucket

The adoption of a high wear resistant 'super v' has increased durability.

## High-rigidity swing frame

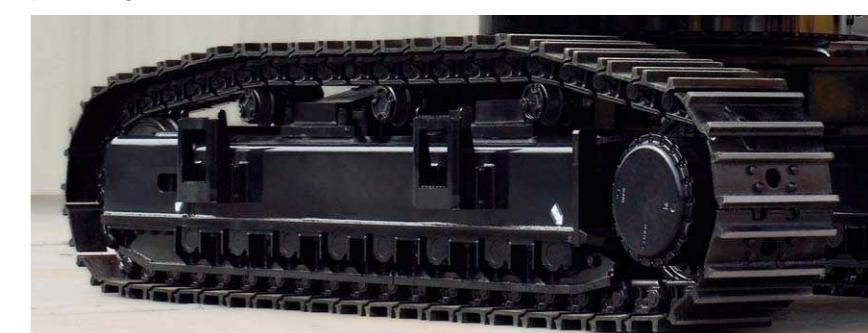

The rigidity and durability of the frame of the upper revolving unit has been increased to withstand rough handling during every operation.

## Reinforced double grouser shoe

The reinforced double grouser shoe permits operation on rough roads, steep slopes, and other work sites where large machines must be used.

## Full track guard prevents derailment (option)

Full track guard is efficient in preventing derailment of the links (chain) and protecting the rollers.

# Maintenance

## EMS permits fuss-free maintenance

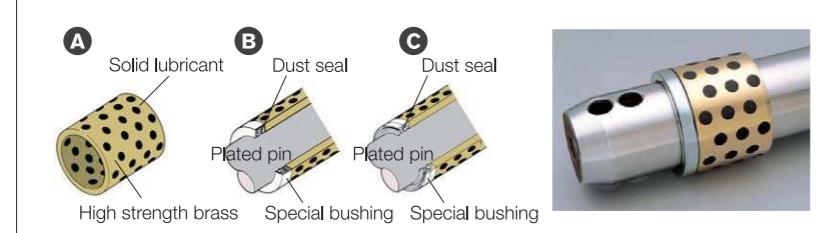

EMS allows greasing of the front attachments at intervals of 1,000 hours and substantially reduces the greasing trouble and time, as well as the maintenance cost, also reducing a noise.

•Greasing interval: **1,000 hours**

\* The greasing interval differs according to the operating condition.

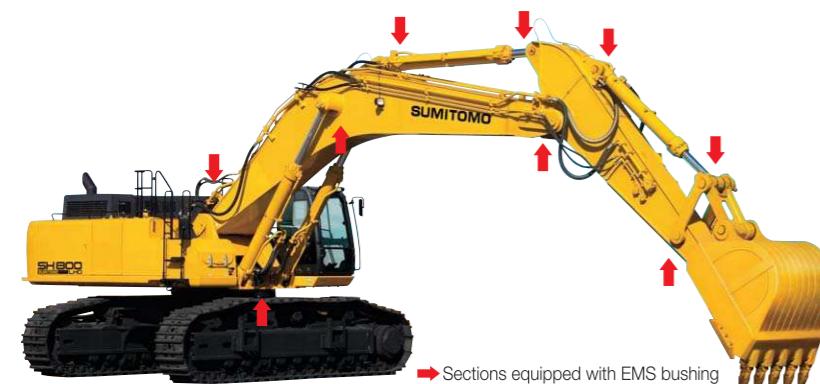

### EMS bushing

Ⓐ A solid lubricant embedded in high strength brass forms a layer on the bush surface to prevent contact between metals, maintaining an excellent lubricated state to reduce abrasion of joints.

Ⓑ The surface of the pin is plated to increase the surface hardness and improve the wear resistance accordingly.

Ⓒ The dust seal has a double structure to prevent entry of abrasive materials and eliminating wear.

### Precautionary use of EMS

- ① Grease impregnated. Greasing is still necessary at every 1,000 hours or six months, whichever comes earlier.
- ② Greasing is necessary after underwater digging operation, because the internal grease can be forced out due to being submerged.
- ③ When a breaker, crusher, or some other special attachment are installed, greasing is necessary every day, because the pins and bushes are different according to the attachment manufacturer.
- ④ Bucket pins should be cleaned thoroughly when removing or fitting new attachments.

## High-Performance Return Filter

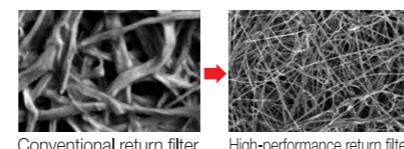

The hydraulic oil change interval is 5,000 hours, and the return filter change interval is 2,000 hours. One high performance return filter keeps the same level of filtering effect as a nephron.

•Hydraulic oil change : **5,000 hours**  
•Life of filter : **2,000 hours**

\* The oil and filter change interval depends on the working conditions.

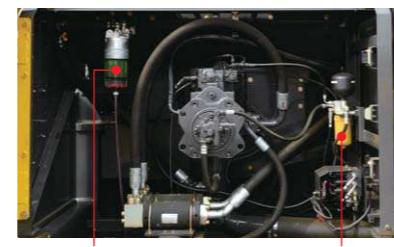

The High-Performance Return Filter is made more precisely to condense the Nephron filter function.

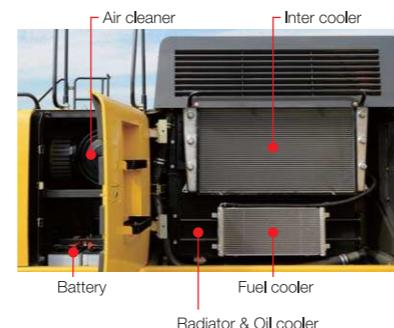

### Remote fuel prefilter

A fuel prefilter is provided as standard equipment to reduce the likelihood of fuel clogging.

Fuel prefilter (with water separator) Pilot filter

## Hydraulically driven cooling fan system

Optimum cooling control and reduction in noise according to the working environment.

## Easier cleaning by reversed fan rotation

## Lifting capacity

Notes: 1. Ratings are based on SAE J/ISO 10567.

- 2. Lifting capacity does not exceed 75% of tipping load with the machine on firm, level ground or 87% full hydraulic capacity.
- 3. The load point is a hook (not standard equipment) located on the back of the bucket.
- 4. \*Indicates load limited by hydraulic capacity.
- 5. 0m = Ground.

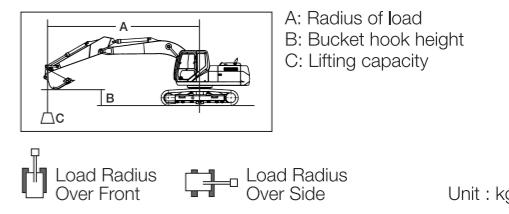

- A: Radius of load
- B: Bucket hook height
- C: Lifting capacity

Notes: 1. Ratings are based on SAE J/ISO 10567.  
2. Lifting capacity does not exceed 75% of tipping load with the machine on firm, level ground or 87% full hydraulic capacity.  
3. The load point is a hook (not standard equipment) located on the back of the bucket.  
4. \*Indicates load limited by hydraulic capacity.  
5. 0m = Ground.
